EDUCATION

Georgia Institute of Technology | *Atlanta, Georgia*
Bachelor of Science, Computational Media | GPA: 3.5 *May 2026*

- Relevant Coursework: Data Structures & Algorithms, Computer Architecture, Database Systems, AI & Machine Learning, Object-Oriented Programming, Operating Systems

EXPERIENCE

AH Webdesign | *Atlanta, Georgia*
Web Developer Intern *May 2026 – August 2026*

- Designed and shipped the backend services behind client facing chatbots on the Claude API, building a retrieval layer over each client's own documentation so answers stay grounded in approved content, and every request is scoped to that client's data.
- Built a Next.js and TypeScript site from scratch, factoring it into a typed, reusable component library with naming and structure clear enough for the team to extend in the future.
- Migrated live client sites, including ASG and Knias Medical, onto custom PHP themes built to match each client's approved designs exactly, cutting over production traffic on their launch dates.
- Translated what clients ask for into what they need, and built it start to finish across backend, frontend, and launch.

DeTerminal | *Atlanta, Georgia*
Full-Stack Intern *May 2025 – Aug 2025*

- Wired up REST and Twitter/X APIs with Node.js to stream live crypto prices into React charts that update as the market moves.
- Consolidated markets, wallets, and individual token views into one tabbed React dashboard, replacing full page loads with components that swap in place so users switch views instantly.
- Turned Figma designs into working React, TypeScript, and Tailwind interfaces, matching the designer's spacing and interactions exactly and releasing alongside the design and product team.

Georgia Institute of Technology | *Atlanta, GA*
Teaching Assistant, Objects and Design *Jan 2025 – May 2025*

- Introduced industry testing practices to the course, teaching unit testing and CI on Django and REST projects so students validated their own code before submission.
- Mentored students through weekly office hours and individual debugging sessions, helping them reason through object-oriented design tradeoffs in their own code.
- Taught core object-oriented principles and API design, helping students write code that was structured rather than just functional.

SOFTWARE PROJECTS

Month.ly — Live on the Apple App Store *Jun 2026 – Present*

- Designed, built, and shipped a period tracking app to the App Store solo with a Java Spring Boot service, PostgreSQL schema, REST API, and automated deploys on Railway, owning every layer from database to App Store listing.
- Trained models that forecast cycle phase up to three months out and embedded inference directly in the Spring Boot service, so predictions return with the API response instead of requiring a separate ML call.
- Built the React Native client and its animated raccoon mascot, then took the app through Apple's review process to public launch on the store.

Company Valuation Prediction Engine *Aug 2025 – Dec 2025*

- Built a Python pipeline that predicts company valuation for 500+ S&P-listed firms, landing 15–20% closer than a standard discounted cash flow model.
- Compared Elastic Net, Random Forest, and Gradient Boosting on held-out folds to see which held up, scoring each on MAE, RMSE, and R-squared.
- Pulled financial data from Yahoo Finance, Kaggle, and WRDS into one training set, filling gaps with imputation, pulling in outliers with winsorization, and putting every feature on the same scale.

VIP Graphic Medicine *Aug 2024 – May 2026*

- Led a team of five turning Figma prototypes into production sites, writing the custom PHP themes and responsive CSS behind interactive medical content.
- Partnered with Shepherd Center to build the web platform behind their patient-education storytelling, handling the API integrations that move content from their systems into the site and making sure it holds up for patients reading on any device.

TECHNICAL SKILLS

- **Languages:** Java, Python, C++, C#, C, JavaScript, TypeScript, SQL, HTML/CSS
- **Backend & Data:** Spring Boot, Node.js, Django, REST APIs, PostgreSQL, MySQL, Docker, CI/CD, Railway
- **Frontend:** React, React Native, Next.js, Angular, Tailwind CSS
- **ML & Practices:** scikit-learn, pandas, NumPy, Git/GitHub, Agile/Scrum, Object-Oriented Design, unit testing
